

Synergy Salon — Homepage Indexing

Status of Google Search Console verification, homepage indexing, and the technical changes made to prepare the page for Google.

PROPERTY	REPORT DATE	PERIOD COVERED	OVERALL STATUS
synergysalon.com	22 September 2026	19 – 22 Sep 2026	Indexed

BOTTOM LINE

The homepage is indexed and can appear in Google search results. Search Console confirms “URL is on Google” and “Page is indexed”. Google crawled the page at 11:39 PM on 21 September, four minutes after the new description, canonical tag and redirect went live, so the indexed copy is very likely the updated version. Google also executed the page’s JavaScript successfully, which resolves the audit’s largest technical concern for this page.

Status at a glance

Item	Status	Detail
Search Console ownership	VERIFIED	HTML-file method, URL-prefix property https://synergysalon.com/
Homepage indexed	YES	“URL is on Google” · “Page is indexed” · served over HTTPS
Crawled after the fixes	YES	Crawled 11:39 PM, 21 Sep; fixes live at 11:35 PM
Google renders the JavaScript	CONFIRMED	Crawled HTML shows classes that only exist after scripts run
Meta description and canonical	LIVE	Present once, before and after JavaScript runs
www → apex redirect	LIVE	Every www address reaches synergysalon.com in one permanent redirect
robots.txt and sitemap.xml	LIVE	Both return 200; sitemap lists the homepage
Video indexing	NOT INDEXED	Expected for an embedded video; no action needed
Request Indexing	RETRY	Google-side error on 22 Sep; retry once on 23 Sep
Sitemap submitted in Search Console	TO CONFIRM	Owner action; not yet confirmed

SECTION 1

What was done

Every change was committed to the site's repository and deployed to production on Vercel. Times are workstation local time (GMT+8).

When	Commit	Change	Purpose
19 Sep, 02:41 AM	234946c	Book Now heading changed from "Your Chair Is Waiting" to "Your Appointment Is Ready"	Content
19 Sep, 08:42 AM	afe99b4	New design export: Kim Batarlis photo and bio card. Two fixes the export had dropped were restored: static favicon links and hero chair centring	Content
21 Sep, 11:18 PM	bd12a03	Search Console verification file published as <code>googlef04c05ffd7b221f8.html</code>	Verification
21 Sep, 11:35 PM	6bb7590	Meta description and self-referencing canonical added to both page heads; <code>www</code> → apex permanent redirect; <code>robots.txt</code> ; <code>sitemap.xml</code>	Indexing
21 Sep, 11:35 PM	7d1d6ea	Redirect rule corrected so the bare <code>www.synergysalon.com/</code> also redirects	Indexing
21 Sep, 11:39 PM	—	Google crawls the homepage successfully	Google
22 Sep	—	URL Inspection confirms the homepage is indexed; Request Indexing returns a Google-side error	Google

The meta description now live

Certified master colorists in Valrico, FL since 2004. Balayage, corrective color, keratin smoothing and precision cuts — every visit starts with a real consultation. Love it, or you don't pay. Book online or call 813.654.2055.

This is the text Google may use as the search snippet. It can take a few days to two weeks to replace the snippet Google currently shows. Google may still choose to write its own snippet for some searches; that is normal and not controllable.

Why the tags were added in two places

The site loads in two stages. The first stage is a small static page; the second stage is built by JavaScript and replaces it. The description, canonical tag and favicons were placed in both, so they are present whether a crawler reads the page before or after the JavaScript runs. A browser check confirmed each tag appears exactly once in the final page, not duplicated.

SECTION 2

What Search Console shows

Search Console field	Result	What it means
URL Inspection	URL is on Google	The homepage is in Google's index and eligible to appear in results.
Page indexing	Page is indexed	No indexing problems were found.
Page crawl	Crawled successfully, 21 Sep 2026, 11:39 PM	Four minutes after the fixes went live, so Google has likely seen the updated page.
HTTPS	Page is served over HTTPS	Secure connection confirmed.
Video indexing	No video indexed — "Video isn't on a watch page"	Google only indexes videos that are the main content of a page. The embedded YouTube video on the homepage is supporting content. This is normal for business homepages and does not affect the page's own indexing.

JAVASCRIPT RENDERING CONFIRMED

The audit flagged that the homepage's content only exists after JavaScript runs, which could prevent Google from seeing it. The crawled HTML in Search Console begins with `<html class="js-anim lenis">`. Those classes are added by the page's scripts, which proves Googlebot executed them and saw the full content. The concern still applies to crawlers that do not run JavaScript, such as Bing and most AI assistants, and remains on the roadmap.

SECTION 3

Issues found and how they were resolved

1. Verification file had the wrong name

RESOLVED

The file was downloaded as `synergy.gsc.html`. Google checks one exact address, and the required name is written inside the file itself: `googlef04c05ffd7b221f8.html`. The file was renamed before publishing, and its contents were confirmed to match byte for byte.

2. The site redirects every `.html` address

RESOLVED — NO CHANGE NEEDED

The site's Vercel setting removes `.html` from addresses with a redirect, including the verification file's address. Google's documentation permits a redirect on the verification file as long as it stays on the same site. The live check showed exactly one redirect on the same domain, ending in a 200 response with the correct contents. Verification succeeded, so the site-wide setting was left alone.

3. The www redirect missed the bare homepage

RESOLVED

After the first deploy, every `www` address redirected correctly except `www.synergysalon.com/` itself. The redirect pattern was changed to the form Vercel documents for whole-domain redirects, and every `www` address was re-tested: each now reaches `synergysalon.com` in exactly one permanent redirect.

4. “We had a problem submitting your indexing request”

RETRY ON 23 SEP

This is a Search Console error, not a website fault. The homepage was re-tested as Googlebot at the time and loaded normally (200 in under one second), as did `robots.txt` and `sitemap.xml`. The error is usually caused by the daily limit of roughly ten indexing requests per property, where failed and repeated attempts also count, or by a temporary Google-side problem that is common on newly verified properties.

Impact is low. The page is already indexed, and it was crawled after the fixes went live. The request would only speed up how quickly the search listing refreshes. If it keeps failing, Google will pick up the changes on its own within days to about two weeks.

SECTION 4

Live verification

Checked against the live site on 22 September 2026.

Address requested	Redirects	Result	Ends at
<code>https://synergysalon.com/</code>	0	200	Homepage, served directly
<code>https://www.synergysalon.com/</code>	1	200	<code>https://synergysalon.com/</code>
<code>/robots.txt</code>	0	200	Allows all crawlers; points to the sitemap
<code>/sitemap.xml</code>	0	200	Lists <code>https://synergysalon.com/</code>
<code>/googlef04c05ffd7b221f8.html</code>	1	200	Verification file, correct contents
<code>/thank-you</code>	0	200	Unaffected by the changes

The homepage’s static head contains exactly one meta description and one canonical tag pointing to `https://synergysalon.com/`. The heading change, Kim’s bio card, the favicons and the centred hero chair are all still live.

Next steps

#	Action	Owner	When
1	Submit the sitemap. In Search Console open <i>Sitemaps</i> , type <code>sitemap.xml</code> and click <i>Submit</i> . Status should read <i>Success</i> within a day.	Owner	Now, if not done
2	Retry Request Indexing once. Inspect <code>https://synergysalon.com/</code> , click <i>Test Live URL</i> , wait for it to finish, then click <i>Request Indexing</i> . Do not retry repeatedly.	Owner	23 Sep
3	Check the canonical. Expand <i>Page indexing</i> ; both <i>User-declared</i> and <i>Google-selected canonical</i> should read <code>https://synergysalon.com/</code> .	Owner	Any time
4	Watch the search listing for the new description and for the old "Synergy Salon™" title to disappear.	Both	Next 2 weeks
5	Capture a performance baseline from the Search Console <i>Performance</i> report, so later results can be compared against it.	Us	This week

Standing rules

NEVER DELETE THE VERIFICATION FILE

`googlef04c05ffd7b221f8.html` must stay on the site permanently. Google re-checks it periodically, and removing it cancels verification.

EVERY NEW DESIGN EXPORT NEEDS FIXES RE-APPLIED

The design export tool drops site-specific fixes each time it exports. It has already dropped the favicons and the chair centring, and it will drop the new meta description and canonical tag the same way. Every future export should be checked and patched before it goes live, or those items silently disappear from the live site.

Progress against the week-one plan

Task	Item	Status
1.2	Verify Search Console; submit homepage for indexing	DONE request to retry
3.2	Meta description and canonical	DONE
3.2	<code>lang</code> attribute and viewport in the static head	PENDING
3.6	www → apex redirect	DONE
3.7	<code>robots.txt</code> and <code>sitemap.xml</code>	DONE submission to confirm
1.3	Baseline capture	PENDING
3.3	Title tag update	PENDING
3.4	Open Graph and Twitter share previews	PENDING
3.5	<code>noindex</code> on the thank-you page	PENDING
2.1	301 redirect from synergyhairsalon.com	PENDING needs access
4.1	Replace or remove unverified testimonials	DECISION NEEDED

The testimonials decision remains the most urgent open item. It is a legal exposure rather than a ranking issue, and it continues for as long as the section stays live.
