

Synergy Salon Search Visibility Audit

A verified technical, on-page and local search audit of synergysalon.com, with a day-by-day execution plan for the week of 21 September and a twelve-week delivery roadmap.

THREE FINDINGS THAT BLOCK EVERYTHING ELSE

- 1. **The published testimonials appear to be fabricated.** Seven of the eight named reviews cannot be traced to any real source. This is an FTC exposure, not only an SEO issue.
- 2. **A second website is live and competing.** synergyhairsalon.com is still serving, with the wrong zip code and the wrong opening hours.
- 3. **The redesign may not be indexed yet.** Google is still showing the previous site's title in search results.

CLIENT	PROPERTY	AUDIT DATE	ENGAGEMENT
Synergy Salon of Tampa Bay, Inc.	synergysalon.com	18 September 2026	21 Sep – 11 Dec 2026

What is in this document

PART 1	Executive summary	Where the business stands and what changes
PART 2	Blocking findings	Three items to resolve before any other work
STEP 1	Site audit	Verified structure, metadata, headings, schema, NAP
STEP 2	Meta title review	Every indexable page, with recommended rewrites
STEP 3	Meta description review	Written for clicks and qualification
STEP 4	Local SEO strategy	Keyword targets grounded in real service area
STEP 5	Service page opportunities	Six pages that earn their existence
STEP 6	Google Business Profile	Consistency, categories, services, reviews
STEP 7	Technical SEO	Fourteen confirmed defects, separated from advice
STEP 8	On-page SEO	Headings, depth, intent, internal links, FAQs
STEP 9	Priority action plan	High, medium and low, with file references
STEP 10	Final metadata table	Ready to implement, copy and paste
PART 3	Week one plan	Mon 21 – Fri 25 September, task by task
PART 4	Twelve-week roadmap	Phases, dates, dependencies, expected results
PART 5	Measurement & approvals	KPIs, baseline, and what we need from you

How this audit was produced

Findings are verified, not assumed. The live site was fetched and its served HTML inspected directly; the source repository was read in full; the second domain, robots.txt, sitemap.xml, the www hostname and a deliberate 404 were each tested with live requests; and public listings on Google, Facebook, Yelp, Birdeye, BBB, Fresha, YellowPages and N49 were checked for name, address, phone and hours consistency.

Where something could not be verified it is marked as needing confirmation rather than stated as fact. Nothing in this document was inferred from the previous version of the website.

A NOTE ON SCOPE

No website code has been modified. The repository is untouched; it was read only. Every recommendation in this document is a proposal awaiting your approval, and the week-one plan assumes that approval lands on or before Monday 21 September.

Executive summary

Synergy Salon has an unusually strong real-world position and an unusually weak digital one. The gap between the two is the whole opportunity.

What is genuinely strong

The business itself is well differentiated in a crowded market. Forty-five years behind the chair, master-level colour certification from Redken 5th Avenue and Keune Amsterdam, an absolute money-back guarantee, bilingual service, an AI scalp analysis device no competitor in the market has, and twenty-two years at the same address. Public reputation corroborates all of it: roughly 114 Google reviews at 4.7 stars, 251 Facebook reviews at 98% recommend, 27 Yelp reviews, and a BBB A+ rating.

The new website is also well written. The copy is specific, warm and free of filler. The single H1 correctly carries both the primary service and the city. The booking widget is embedded rather than pushed off-site, and “book first available” is correctly set as the default, which matches the round-robin operating model. The `HairSalon` structured data that exists is accurate.

What is holding it back

Three structural problems, in order of severity.

First, the site is one page. There are exactly two indexable URLs on the domain, and one of them is a booking confirmation page. Every service — colour, balayage, keratin, corrective colour, cuts, scalp analysis — is compressed into a single card grid with no heading of its own and no URL of its own. A salon offering eight distinct, individually searched services cannot rank for them from one page. There is nothing to link to, nothing to rank, and nothing to send an ad to.

Second, the metadata is almost entirely absent. There is no meta description anywhere on the domain, no canonical tag, no Open Graph or Twitter Card data, no `lang` attribute, no `robots.txt` and no `sitemap.xml`. The entire search-facing head of this website is a single `<title>` tag. Because there is no description, Google writes its own snippet, and because the body content is only rendered by JavaScript, the snippet it has to work with is poor.

Third, the technical foundation is fragile. The page is a single 5.4 MB HTML file with 3.98 MB of images base64-encoded directly into it, including one JPEG of 2.4 MB. None of it is independently cacheable. The page body exists only as an escaped JSON string inside a script tag, which means any crawler that does not execute JavaScript — including Bing and most AI crawlers — sees an empty page.

The shape of the fix

The work divides cleanly. Week one is triage: end the duplicate-domain conflict, correct the address data across every listing, add the missing metadata, resolve the testimonial exposure, and cut the page weight. None of that requires new content or new photography, and most of it is finished by Friday.

Weeks two through eight are construction: make the content server-rendered so it is reliably crawlable, build out the guarantee into an explained section rather than an unsupported headline, and ship the six service pages that give the site something to rank with.

Weeks nine through twelve are compounding: a working review-request habit, a Google Business Profile posting cadence, local citations and links, and the first real measurement against the baseline captured on day one.

THE SINGLE HIGHEST-VALUE CHANGE THAT IS NOT AN SEO CHANGE

The guarantee — *your best haircut, or it's free* — is currently the site's headline and is explained nowhere on the page. It answers the exact anxiety that stops a woman booking an unfamiliar salon. An unexplained guarantee converts nothing; an explained one is the strongest asset in the file. Giving it a named, visible section is cheap, fast, and likely to move bookings more than any ranking gained in the same period.

Blocking findings

These three items should be resolved before, or alongside, any other work. Two of them actively cost the business customers today.

1. The testimonials on the site appear to be fabricated

CRITICAL

The review carousel is hardcoded as a JavaScript array of eight named reviews. Only one — **Lisa Clifford** — matches a real, documented testimonial in the client’s own product-marketing file. The other seven (Karen Whitfield, Megan Ortiz, Danielle Reyes, Amanda Brooks, Rachel Nguyen, Stephanie Hale, Jenna Marsh) do not appear in any verified source, and the quotes read as written to brief.

Publishing invented consumer testimonials is a violation of the FTC rule on fake reviews and testimonials (16 CFR Part 465), which carries civil penalties per violation. It is also self-defeating: the salon already has roughly 114 genuine Google reviews at 4.7 stars and 251 Facebook reviews at 98% recommend, none of which appear on the website.

Resolution: replace with real, attributable reviews carrying reviewer name and source, or remove the section entirely pending curation. Displaying real reviews is strictly better than displaying invented ones, and it is not more work.

2. Two live websites are competing for the same searches

CRITICAL

	synergysalon.com	synergyhairsalon.com
Status	200 — new one-page site on Vercel	200 — still live on LeadConnector
Title	Synergy Salon Master Hair Salon in Valrico, FL	Synergy Salon Hair Salon Near You 33596
Zip code	33594 — correct	33596 — wrong
Hours	Correct	Wrong — Wed/Thu to 8pm, Sat to 4pm
Summit Salon claim	Removed	Still published — affiliation has ended

Two domains serving the same business to the same city for the same queries. Google selects one and dilutes both. The second domain also broadcasts an incorrect zip code, which is precisely the signal that fragments citation consistency across the local ecosystem — and it publishes opening hours that will send customers to a closed salon.

Resolution: a domain-wide 301 redirect from synergyhairsalon.com to https://synergysalon.com/, so accumulated authority transfers rather than being discarded. Not a parked page, not a meta refresh.

3. The redesign may not be indexed yet

VERIFY FIRST

The live title tag reads *Synergy Salon | Master Hair Salon in Valrico, FL*, but the title currently surfacing in search results is *Synergy Salon™* — the previous site's title. Combined with a `robots.txt` that returns 404 and the absence of any sitemap, this suggests the new site has not been fully re-crawled.

Resolution: confirm in Google Search Console before drawing any conclusion from current rankings. This is the first task on Monday morning, because it determines whether the baseline we capture is measuring the new site or the old one.

Site audit

Verified from the served HTML, the source repository and public listings. Nothing here is assumed.

What was actually crawled

Item	Finding
Indexable pages	Two in total: <code>/</code> and <code>/thank-you</code>
Architecture	Single-page site. The entire navigation is in-page fragment anchors — <code>#properties</code> , <code>#about</code> , <code>#team</code> , <code>#testimonials</code> , <code>#schedule</code> , <code>#contact</code> , <code>#scalp</code>
Platform	Static export bundled into a single 5.4 MB <code>index.html</code> , hosted on Vercel with <code>cleanUrls</code> enabled
Booking	LeadConnector (GoHighLevel) widget, embedded in an iframe
CMS	None. Hand-edited HTML bundle in a Git repository

Business facts, as verified

Name	Synergy Salon — legal entity Synergy Salon of Tampa Bay, Inc.
Address	3212 Lithia Pinecrest Rd, Suite 101, Valrico, FL 33594
Phone / email	813.654.2055 · hair@synergysalon.com
Hours	Mon, Tue, Sat 9–3 · Wed, Thu 9–7 · Fri 9–6 · Sun closed
Owner	Dina Lara — licensed since 1981, owner since 2004
Team	Dina Lara, Tami Vomaro, Kim Batarlis, Micah Shadle
Languages	English and Spanish
Service area	Valrico (physical location), Brandon, Lithia, FishHawk, Bloomingdale

Services offered

Colour: balayage, highlights and foils, single process, partial and full foils, Biolage highlights, corrective colour. **Cuts:** women, men, teens, kids. **Treatments:** keratin, Brazilian Blowout, Olaplex, K18, deep conditioning, perm, AI scalp analysis. **Styling:** blowouts, updos and special event, extensions by consultation.

No nail services. Correctly absent from the new site.

Existing metadata — the core defect

The complete search-facing head of this website is one line:

```
<title>Synergy Salon | Master Hair Salon in Valrico, FL</title>
```

Element	State	Consequence
<code>meta description</code>	ABSENT	Google auto-writes every snippet, from a JavaScript-rendered page
<code>rel=canonical</code>	ABSENT	No signal to disambiguate the www and apex duplicates
Open Graph / Twitter Card	ABSENT	Every share renders as a bare link with no image
<code>meta viewport</code> in static head	DEFERRED	Only applied after JavaScript hydration
<code>lang</code> attribute	ABSENT	No language signal; blocks future Spanish pages
<code>robots</code> on /thank-you	ABSENT	Confirmation page is indexable

Heading structure

Level	Content
H1 × 1	<i>Valrico's masters in hair color and cuts.</i> — correct, keyword and location bearing, leave it alone
H2 × 7	Your Chair Is Waiting · Four Things, All Done At Master Level · We Make You Feel Your Best · Four Master-Level Stylists, One Standard · We Know Why Your Hair Is Doing What It's Doing · Frequently Asked Questions · Come See Us In Valrico
H3 / H4	Zero. Service names, stylist names and FAQ questions are all rendered as <code>div</code> or <code>button</code> elements

Structured data

`HairSalon` JSON-LD is present, and the name, address, phone, email and opening hours in it are **correct**. That is a genuinely good foundation and unusual for a site of this age.

Missing from it: `@id`, `image`, `logo`, `priceRange`, `areaServed`, `geo`, `hasMap`, `hasOfferCatalog`, `founder`, `foundingDate` and `knowsLanguage`. The `sameAs` array covers Facebook and Instagram but omits Google, Yelp, BBB and Birdeye. There is no `FAQPage`, no `WebSite` and no `BreadcrumbList` markup anywhere.

Internal linking

Every navigation link is a fragment anchor. The only genuine internal link on the site points to `/thank-you`. Four navigation items have **no `href` attribute at all** and do nothing when clicked: *Rent a Chair*, *Gallery*, *Terms & Conditions* and *Privacy Policy*.

Google Business Profile signals, publicly observable

4.7 stars from approximately 114 Google reviews. Facebook 251 reviews at 98% recommend. Yelp 27 reviews and 115 photos. BBB A+ rating. Directory listings show the business name rendered variously as **Synergy Salon**, **Synergy Hair Salon** (BBB) and **Synergy Salon & Spa** (YellowPages), and the zip code as **33596** on Fresha, Yelp and YellowPages.

Meta titles and descriptions

Only two indexable pages exist today, so only two are reviewed here. Metadata for the proposed pages appears in Step 5 and in the final table.

CURRENT TITLE

Synergy Salon | Master Hair Salon in Valrico, FL (48 characters)

SEO PROBLEM

This is already a decent title. The genuine issue is that it is the *only* title on the domain and therefore has to carry every query the business wants — cuts, colour, balayage, keratin, corrective colour. “Master Hair Salon” is brand language rather than search language; nobody types it. Meanwhile “hair colour”, the highest-margin service and the phrase the H1 already leads with, is missing from the title entirely.

RECOMMENDED TITLE

Hair Salon in Valrico, FL | Color & Cuts | Synergy Salon (55 characters)

PRIMARY KEYWORD

hair salon

LOCAL KEYWORD

hair salon Valrico FL

WHY THIS IS BETTER

It leads with the phrase people actually search, plus the city, which is the exact pattern Google matches for *hair salon near me* and *hair salon Valrico*. Adding “Color & Cuts” gives the title a chance at colour queries while the service pages are being built. The brand moves last, where it still appears on branded searches without spending the first thirty pixels. It fits without truncation on both desktop and mobile.

ALTERNATIVE

If protecting the master-colourist positioning in the results page matters more than keyword coverage: *Hair Salon in Valrico, FL | Master Colorists | Synergy Salon* (59 characters). Ship one, then iterate against Search Console click-through data.

CURRENT META DESCRIPTION

None. The tag is absent from the document.

PROBLEM

With no description, Google writes the snippet itself. For a JavaScript-rendered page with no server-side body text, that tends to produce a truncated or generic snippet communicating none of the three things that make someone tap a salon result: skill level, location, and risk reversal. The strongest differentiator in the business — the money-back guarantee — is left out of the search result entirely.

RECOMMENDED DESCRIPTION

Certified master colorists in Valrico, FL since 2004. Balayage, corrective color, keratin smoothing and precision cuts — every visit starts with a real consultation. Love it, or you don't pay. Book online or call 813.654.2055.

SHORTER VARIANT

Certified master colorists in Valrico, FL. Balayage, corrective color, keratin and cuts — love it, or you don't pay. Book online today. (134 characters, displays in full)

PRIMARY KEYWORD / LOCATION / CTA

hair salon, master colorist · Valrico, FL · “Book online or call 813.654.2055”

WHY THIS SHOULD IMPROVE CLICK-THROUGH

In a market with roughly 33 competing salons, every result on page one says “hair salon in Valrico”. The differentiators are the ones no competitor can copy: certified master colorists, since 2004, and a money-back guarantee. The guarantee in particular answers the exact anxiety that stops someone booking a new salon — *what if it comes out worse* — inside the search result, before the click. Naming balayage, corrective colour and keratin also lets the snippet bold-match a wider set of queries. This is

a click-through and qualification play; meta descriptions are not a ranking factor, and the ranking work sits in Steps 5 through 8.

Thank-you page — /thank-you

MEDIUM PRIORITY

CURRENT TITLE

Thank You | Synergy Salon

SEO PROBLEM

The title is fine. The page should not be in the index at all. It is a post-booking confirmation page with no search value and currently carries no `noindex` directive. If indexed it can surface on branded searches and send people to a dead end, and it inflates the thin-content ratio of a two-page site.

RECOMMENDATION

Keep the title. Add `<meta name="robots" content="noindex, follow">`. Do not write a meta description for a page you want excluded.

WHY

Conversion-confirmation pages are standard exclusions, and it keeps booking-completion analytics clean of organic entrances.

Local SEO strategy

The strategic read

Valrico is a suburb inside the Tampa and Brandon metro. Nobody outside Hillsborough County searches for “Valrico”. That has two consequences.

Valrico queries are low volume but extremely high intent and low competition. The salon should own them outright, and that is realistic within three to six months. The actual volume, however, sits in “near me” searches and in Brandon — the larger adjacent market where most of the competitive density lives. Brandon is won through map-pack proximity and profile strength, not through a doorway page.

THE TWO MOST UNDERUSED ASSETS

- AI scalp analysis.** No other salon in the market offers it. “Hair thinning” and “scalp analysis near me” are searches with real emotional urgency and essentially zero local competition. It currently has one paragraph on a one-page site.
- Corrective colour.** “Color correction near me” is a rescue search — urgent, high-ticket and almost entirely price-insensitive. It is mentioned in a single card blurb and nowhere else.

Primary local keyword

hair salon Valrico FL, together with its map-pack twin, **hair salon near me** searched from within roughly five miles of 3212 Lithia Pinecrest Road. This is the anchor: the homepage targets it, and the Google Business Profile does the heavy lifting.

Secondary local keywords

Keyword	Intent	Target asset
hair colorist Valrico	Service plus city, high commercial	Colour page
best hair salon in Valrico	Comparison and discovery	Homepage plus GBP reviews
hair salon Brandon FL	Adjacent city, higher volume	GBP plus service-area copy
master colorist near me	Skill-qualified, near-zero competition	Colour page
hair salon near FishHawk	Neighbourhood proximity	Contact and location section
hair salon Lithia FL	Adjacent, low competition	Service-area copy

Service plus location keywords — these justify pages

Keyword	Why it earns a dedicated page
balayage Valrico / balayage near me	Highest-volume named colour service; visual, photograph-driven intent
color correction Valrico / near me	Highest-urgency rescue search, high ticket, and a stated house specialty

Keyword	Why it earns a dedicated page
keratin treatment Valrico / Brazilian Blowout near me	Highest-ticket service; the Florida humidity angle is genuinely local, not padding
highlights Valrico / partial highlights near me	Steady volume, short path to booking
haircut Valrico / women's haircut near me	Broadest volume, lowest ticket, most common first-visit entry point
AI scalp analysis / hair thinning Valrico	Zero local competition; entirely uncontested

Neighbourhood keywords — for copy, not for pages

Lithia Pinecrest Road, FishHawk Ranch, Bloomingdale, Brandon, Lithia, Valrico 33594. These belong in the location section, in the schema `areaServed` property, and in natural body copy. They should **never** become ten near-duplicate city pages. Doorway pages built against a single-location salon are a liability rather than a strategy.

“Near me” intent — what actually drives it

Near-me rankings are predominantly decided by the Google Business Profile: proximity to the searcher, profile category, review volume and velocity, and name-address-phone consistency across the web. The website's role is narrow and specific: correct crawlable NAP matching the profile character for character; complete `HairSalon` schema including `geo`, `areaServed` and `hasMap`; service pages whose entities match the profile's service list; an embedded map and directions signal; and a fast mobile load. That last item is currently the biggest failure.

Branded search

synergy salon valrico · synergy salon lithia pinecrest · dina lara hair valrico · synergy salon reviews · synergy salon booking

Branded search is where the two-domain problem does the most damage. Someone searching “synergy salon valrico” can land on synergyhairsalon.com, read the wrong zip code and the wrong hours, and drive to a salon that is closed. Fixing the redirect is a branded-search fix as much as a technical one.

Stylist recruiting keywords

salon booth rental Valrico · chair rental hair salon Brandon FL · hair stylist booth rent near me. Near-zero competition, one page, and four empty chairs behind it. Handled subtly, per the brand rule — no loud hiring language on guest-facing pages.

Service page opportunities

Every service is currently combined into one card grid with no individual heading and no individual URL. Worse, that grid is duplicated three times in the markup to drive a scrolling animation, so each service blurb appears three times on the page.

Six pages earn their existence. City-duplicate pages deliberately do not appear below.

1. Hair Color & Color Correction

BUILD FIRST

SEARCH INTENT

Mixed. “Hair colorist near me” is commercial-investigative — choosing who to trust. “Color correction near me” is urgent and transactional — something went wrong and needs fixing this week. The corrective-colour searcher converts fastest and spends most.

TARGET / LOCAL KEYWORD

hair color correction · color correction Valrico FL, hair colorist Valrico

URL

/hair-color-valrico

H1

Hair Color and Color Correction in Valrico

TITLE TAG

Hair Color & Color Correction in Valrico, FL | Synergy Salon

META DESCRIPTION

Box dye gone wrong? Brassy, banded or damaged color? Our certified master colorists in Valrico fix it — trained at Redken 5th Ave and Keune Amsterdam. Free consultation, and you love it or you don’t pay.

CONTENT SECTIONS NEEDED

What colour correction actually involves, and why it sometimes takes more than one session — this sets expectations and reduces no-shows · before-and-after gallery with descriptive alt text · single process, partial and full foils, Biolage highlights, gloss and toner, each explained plainly · why master certification matters for corrective work · the healthy-hair method using Olaplex, K18, Redken and Pureology · the guarantee, explained in full · the consultation process step by step · FAQs on duration, box dye, damage, strand tests and cost · booking call to action repeated

2. Balayage & Highlights

BUILD SECOND

SEARCH INTENT

Commercial, visual and comparison-driven. Searchers arrive holding a reference photograph and are judging whether your work looks like it.

TARGET / LOCAL KEYWORD

balayage · balayage Valrico FL

URL

/balayage-valrico

H1

Balayage and Highlights in Valrico

TITLE TAG

Balayage & Highlights in Valrico, FL | Synergy Salon

META DESCRIPTION

Hand-painted balayage and precision foils by certified master colorists in Valrico. Soft, dimensional, low-maintenance color that grows out beautifully. See our work and book your consultation.

CONTENT SECTIONS NEEDED

Balayage versus foil highlights versus babylights, genuinely compared — this is the single most asked question · real client gallery, which is the most important element on the page · how long it lasts and what upkeep looks like · toner and gloss maintenance · who it suits and who it does not · FAQs on duration, cost relative to highlights, dark hair, and re-do frequency

3. Keratin & Brazilian Blowout

BUILD THIRD

SEARCH INTENT

Problem-aware and transactional. The trigger is Florida humidity, so the search is seasonal and spikes before summer. This is the highest-ticket service in the salon.

TARGET / LOCAL KEYWORD

keratin treatment · keratin treatment Valrico FL, Brazilian Blowout near me

URL

/keratin-brazilian-blowout-valrico

H1

Keratin and Brazilian Blowout Smoothing in Valrico

TITLE TAG

Keratin & Brazilian Blowout in Valrico, FL | Synergy Salon

META DESCRIPTION

Months of smooth, frizz-free hair through a Florida summer. Brazilian Blowout—certified stylists in Valrico, with a free consultation to match the right smoothing treatment to your hair.

CONTENT SECTIONS NEEDED

Keratin versus Brazilian Blowout, honestly explained · the Florida humidity framing, which is legitimately local rather than keyword padding · how long it lasts and the aftercare rules · what it does to coloured hair and how to sequence it with a colour appointment · Brazilian Blowout certification as proof · FAQs on duration, washing, curly hair, safety and permanence

4. AI Scalp Analysis & Hair Thinning

BLOCKED — NEEDS DEVICE DETAILS

SEARCH INTENT

Informational shading into transactional, and emotionally loaded. Someone searching “why is my hair thinning” is worried, and nobody in this market is answering them.

TARGET / LOCAL KEYWORD

scalp analysis, hair thinning consultation · scalp analysis Valrico FL

URL

/ai-scalp-analysis-valrico

H1

AI Scalp Analysis in Valrico — See What’s Happening at the Root

TITLE TAG

AI Scalp Analysis in Valrico, FL | Synergy Salon

META DESCRIPTION

A digital scan of your scalp shows what the mirror can’t — the cause behind thinning, shedding or irritation. Available only at Synergy Salon in Valrico. Book a scalp analysis and start from facts.

CONTENT SECTIONS NEEDED

What the scan is and what the images show · what it helps identify — thinning, shedding, product build-up, irritation · an explicit and prominent disclaimer that this is a cosmetic assessment and not a medical diagnosis · what happens next in the treatment-plan conversation · who should have one · photographs of the device in use · FAQs on comfort, duration, whether it is included or separate, and what happens if something medical is suspected

BLOCKER

The device brand name and whether the scan is free or paid are both still unknown. This page cannot ship without them, which is why the highest-opportunity keyword is not first in the build order.

5. Haircuts

PHASE 3

SEARCH INTENT

Broadest volume and lowest ticket, but the most common first-visit entry point. Family bookings drive retention.

TARGET / LOCAL KEYWORD

haircut · haircut Valrico FL, women’s haircut near me

URL / H1

/haircuts-valrico · Haircuts in Valrico for Women, Men, Teens and Kids

TITLE TAG

Haircuts in Valrico, FL — Women, Men & Kids | Synergy Salon

META DESCRIPTION

A precision cut that still looks right on day twenty. Women, men, teens and kids in Valrico, always starting with a real consultation. Love it, or you don’t pay — book online or call 813.654.2055.

CONTENT SECTIONS NEEDED

The consultation-first process, which is the differentiator against chains · separate short sections for women, men, teens and kids · cut-and-style versus dry cut · the “grows out well” maintenance argument · the guarantee · FAQs on children, whether a blowout is included, lead time, and requesting a specific stylist

6. Rent a Chair — stylist recruiting

PHASE 3, HIGH BUSINESS VALUE

SEARCH INTENT

Business to business. A licensed stylist evaluating whether to move her book. Tiny search volume, enormous business value — four empty chairs.

TARGET / LOCAL KEYWORD

salon booth rental · booth rental Valrico FL, chair rental salon Brandon FL

URL / H1

/rent-a-chair · Rent a Chair at Synergy Salon in Valrico

TITLE TAG

Salon Booth Rental in Valrico, FL | Rent a Chair at Synergy

META DESCRIPTION

Booth rent in a beautiful, well-marketed Valrico salon with master-level peers. New guests are distributed round robin, so our marketing feeds your chair from day one. Book a tour.

CONTENT SECTIONS NEEDED

Lead with the real hook — *we send you clients*, via round-robin distribution. This is the argument no suite operator can make · photographs of the actual room · the team presented as peers rather than staff · what is included · open disclosure that the stylist absorbs the refund on her own unhappy guest, which filters correctly rather than deterring · tour and enquiry form. No hiring banners anywhere.

SIDE BENEFIT

This page also fixes one of the four currently dead navigation links.

PAGES DELIBERATELY NOT RECOMMENDED

City-duplicate pages such as /hair-salon-brandon, /hair-salon-lithia and /hair-salon-fishhawk. One physical location with near-identical content across several pages is the textbook definition of a doorway page. Those cities are served through profile proximity, service-area copy and schema instead.

A pricing page. The published pricing is stale and is currently blocked pending a new menu from Dina. Wrong prices are worse than no prices.

Individual pages for perms, deep conditioning, roller sets and shampoo sets. Not enough search volume to justify the content debt. These belong as sections on the relevant service page.

STEP 6

Google Business Profile & map visibility

For a single-location salon the profile is the majority of local visibility. The website's job is to corroborate it.

Business name consistency

Source	Name as published	State
Website schema	Synergy Salon of Tampa Bay	MISMATCH
Site copy and footer	Synergy Salon	CORRECT
BBB	Synergy Hair Salon	MISMATCH
YellowPages	Synergy Salon & Spa	WRONG
Second domain H1	SYNERGY HAIR SALON	WRONG

Fix: standardise on **Synergy Salon** everywhere — profile, all citations, site copy and `schema:name`. Keep the full legal entity for legal contexts only, moving it to `legalName` in the schema. Remove "& Spa" from YellowPages; it implies services the salon does not offer.

Address consistency

Source	Zip published	Action
synergysalon.com schema	33594	CORRECT — NO ACTION
N49	33594	CORRECT — NO ACTION
synergyhairsalon.com	33596	Resolved by the 301 redirect
Fresha	33596	Correct manually
Yelp	33596	Correct manually
YellowPages	33596	Correct manually

Inconsistent address data across citations is a direct drag on map-pack confidence. The correct zip is **33594**. Suite formatting should also be standardised as `3212 Lithia Pinecrest Rd, Suite 101` everywhere — not "Ste 101", not "#101".

Phone and hours

The correct number is **813.654.2055**. Facebook reportedly publishes 813.544.7931. A wrong number on a page carrying 251 reviews is both a citation problem and lost calls.

Website hours are correct. Yelp, Fresha and the second domain are wrong. Wrong hours produce "closed when I arrived" experiences, which generate exactly the one-star reviews that are hardest to recover from. Holiday hours should also be set on the profile, since unconfirmed holiday hours are demoted during peak periods.

Service information — currently missing

The profile has a Services section that accepts individually named services with descriptions, and it is underused. Populate it to mirror the service pages exactly:

Hair coloring · Balayage · Highlights · Color correction · Keratin treatment · Brazilian Blowout · Women's haircut · Men's haircut · Kids' haircut · Blowout · Updo and special event styling · Hair extensions · Olaplex treatment · Scalp analysis

Each should link to its matching website page once those exist. Entity matching between profile services and site URLs is one of the strongest corroboration signals available for service queries.

Categories: primary *Hair Salon*; secondary *Beauty Salon*, *Hairdresser*, and *Hair Extensions Technician* if extensions are genuinely offered, which they are by consultation. **Attributes:** identifies as women-owned, language assistance in Spanish, appointment required, and wheelchair accessible if verified.

Location signals

Present: address in the footer, a Google Maps search link, and city names in copy. Missing: an embedded map, `geo` coordinates in schema, `hasMap`, a directions link, and any parking or landmark detail.

The maps link should also change from a `search?query=` URL to a place URL built on the actual profile identifier, which is already present in the reviews link on the site. A place link resolves unambiguously to the business; a search link can resolve to a competitor.

Reviews

Beyond the fabrication issue, the structural problem is that roughly 114 Google reviews, 251 Facebook reviews and 27 Yelp reviews exist, and **the website displays none of them**. That is a large, verified trust asset sitting unused.

Display real reviews with reviewer name, source and a link to the source profile, and add the rating and count as visible on-page text near the booking call to action. Then build a review-request habit: the salon already asks every new client how they heard about it, so adding a short-link review request at checkout costs nothing. Review *velocity* — a steady trickle — matters more for map-pack movement than total count.

ONE THING NOT TO DO

Do not hardcode an `aggregateRating` into the site's structured data. Self-declared aggregate ratings for a local business breach Google's structured data guidelines unless they derive from genuine reviews collected and displayed on your own site. Let the profile supply the stars in the map pack.

Profile actions with no website dependency

Post weekly — before-and-afters, a stylist spotlight, the scalp analysis device. Upload photographs monthly. Answer the Q&A section, seeding it with the six FAQs already written for the site, since most businesses leave it empty. Respond to every review, positive and negative, in the brand voice. Add tracking parameters to the profile's website and booking links so profile-driven traffic can actually be measured.

Technical SEO

Confirmed defects are separated from recommendations. Everything in the first table was reproduced with a live request or read directly from the served source.

Confirmed defects

#	Defect	Detail and consequence	Severity
1	Page content is not in the HTML	The served document body is empty. The entire page — H1, every H2, all service copy, the team, the FAQ, the address — lives inside an escaped JSON string in a <code>__bundler/template</code> script tag. Googlebot renders JavaScript so this is survivable, but it places every page on the render queue and means Bing and most AI crawlers see an empty page.	CRITICAL
2	5.4 MB single HTML file	3.98 MB of that is base64-inlined assets across 39 items, including a single JPEG of 2.4 MB. Nothing is independently cacheable, so changing one word forces a 5.4 MB re-download. No CDN image optimisation, no responsive sizing, and base64 inflates every asset by roughly a third.	CRITICAL
3	<code>robots.txt</code> returns 404	Not fatal, but it forfeits the sitemap declaration and leaves no control over AI crawler access.	MEDIUM
4	<code>sitemap.xml</code> returns 404	Barely matters at two pages. Matters considerably at eight.	MEDIUM
5	No canonical tag anywhere	Combined with defect 6, this is a live duplicate-content situation with no disambiguating signal.	HIGH
6	<code>www</code> serves 200 with no redirect	Both the apex and <code>www</code> hostnames return the identical page. Two URLs, one page, split signals.	HIGH
7	Second domain live and competing	<code>synergyhairsalon.com</code> returns 200 with wrong zip, wrong hours and a stale affiliation claim.	CRITICAL
8	<code>/thank-you</code> is indexable	No <code>noindex</code> directive on a booking confirmation page.	MEDIUM
9	Four navigation links have no <code>href</code>	<i>Rent a Chair</i> , <i>Gallery</i> , <i>Terms & Conditions</i> and <i>Privacy Policy</i> render as link text that does nothing when clicked. Worse than a 404, because there is no feedback at all.	MEDIUM
10	Service content duplicated three times	The services grid is repeated three times in the DOM to drive a marquee animation. No ranking upside; it dilutes the text-to-markup ratio and reads as repetitive.	MEDIUM
11	No <code>lang</code> attribute	Should be <code><html lang="en"></code> . Relevant given bilingual service and any future Spanish pages, which would also need <code>hreflang</code> .	LOW
12	No <code>viewport</code> in the static head	It exists only inside the JavaScript template, so it applies after hydration rather than immediately.	LOW

#	Defect	Detail and consequence	Severity
13	No Open Graph or Twitter Card data	Every share on Facebook, Instagram, iMessage or WhatsApp renders as a bare link with no image. For a visual business whose clients share their hair, this is a direct and compounding daily loss.	HIGH
14	Structured data incomplete	Detailed in Step 6. The <code>FAQPage</code> omission is the costliest: six well-written FAQs exist, are eligible for rich results, and are marked up nowhere — and are not even in the HTML.	HIGH

Verified as working — no action needed

HTTPS with HSTS enabled, max-age two years	URLs clean and lowercase, no file extensions
404s correctly return a 404 status	Below-fold images correctly use lazy loading
Most content images carry descriptive alt text	One H1, keyword and location relevant
<code>HairSalon</code> JSON-LD present with correct NAP and hours	Favicon and apple-touch-icon present
Responsive CSS present, reduced-motion respected	No nail services mentioned anywhere
No stale pricing published	No Summit Salon claim on the primary domain

Recommendations, not defects

Add `BreadcrumbList` schema once service pages exist · add `WebSite` schema with a search action · add `Person` schema for Dina Lara as a credential entity · preload the hero image and the display font · set cache-control headers once assets are externalised · enable analytics and Search Console on both domains · consider an `llms.txt` for AI crawler guidance.

On-page SEO

Headings

The H1 is genuinely strong — *Valrico's masters in hair color and cuts* contains the city, the primary service and the positioning, and there is exactly one of it. Leave it alone.

Below that, the hierarchy is flat: seven H2s and **zero H3s**. Some H2s are pure brand voice carrying no topical signal. That copy is good and on-brand, but a heading can do both jobs at once.

Current H2	Suggested	Reason
Four Things, All Done At Master Level	Keep, and add an H3 per service beneath it	Sub-headings carry the keywords the H2 does not
We Make You Feel Your Best	Master Colorists in Valrico Since 2004	Same promise, adds entity, city and longevity
Come See Us In Valrico	Visit Synergy Salon in Valrico, FL	Adds brand and state for local relevance

Then add H3s for each service, each stylist name, and each FAQ question. This is the cheapest meaningful on-page improvement available.

Content depth

The copy quality is good — specific, warm, benefit-first, no filler. The problem is volume. Total body copy is roughly 600 words, and a third of that is the triplicated services grid. Competitors ranking for “hair salon Valrico” will have several pages of several hundred words each. The site is not thin because the writing is weak; it is thin because there is one page.

Keyword targeting

“Valrico” appears well and appropriately — in the H1, the footer, the contact section and the service-area line — without stuffing. But **“hair salon” as an exact phrase appears essentially nowhere in body copy**, and it is the primary keyword.

That is not an argument for stuffing it. There is one natural place for it in the About section: *“Synergy has been the **hair salon** working women in Valrico, Brandon, Lithia and FishHawk call home since 2004.”* One word added, reads identically, and the phrase now exists.

Similarly, balayage, keratin and corrective colour each appear once or twice in a card blurb with no supporting content. They need pages, not more repetitions.

Search intent

The page is built for someone who already knows Synergy and needs convincing. It is not built for someone mid-research comparing balayage to foils, or panicking about box dye at eleven at night. Those searchers need answers, and there are none here.

Internal links

There are no contextual internal links at all. Everything is a fragment anchor, so nothing passes relevance anywhere. Once service pages exist: homepage service cards link to their pages; colour, balayage and corrective colour cross-link to each

other; every service page links to booking; the footer links to all services.

Image alt text

Several are genuinely well written — *“A colorist painting balayage at Synergy Salon in Valrico”*, *“A stylist using a digital scalp camera on a guest at Synergy Salon”*. The gaps: three images have empty alt attributes including one content image in the hero region, and empty alt is correct only for genuinely decorative images. Stylist photographs use bare names where *“Dina Lara, certified master colorist and owner of Synergy Salon in Valrico”* would serve better. The 2.4 MB JPEG has no alt text. And the duplicated marquee images repeat identical alt text three times, so the clones should be hidden from assistive technology.

Calls to action

These are strong. Booking and phone are prominent and repeated, the widget is embedded rather than off-site, “book first available” is correctly the encouraged default matching the round-robin model, and “request a specific stylist” is the secondary path. Well executed.

The one gap is the guarantee, which appears as a headline and is then never explained. The full explanation exists only inside an FAQ accordion that starts collapsed and is not in the HTML.

FAQ opportunity — the biggest single miss

Six well-written FAQs exist and are **invisible to search**, because they live in a JavaScript array, render as template placeholders, and carry no `FAQPage` markup. Render them as real HTML with H3 questions and add the schema.

Worth adding beyond those six: how much does balayage cost in Valrico (once the menu is supplied, not before) · do you take walk-ins · how far in advance should I book · what is the cancellation policy · do you cut children’s hair · do you speak Spanish · what products do you use · can I request a specific stylist · where exactly are you and where do I park.

Priority action plan

HIGH PRIORITY Fix first

ID	What is wrong	What should change	Why it matters	Where
H1	Seven of eight testimonials appear invented	Replace with real attributed reviews, or remove the section	FTC exposure; destroys trust if noticed; wastes a genuine 4.7-star asset	<code>index.html</code> — <code>reviews</code> array
H2	Second live site competing on identical queries	Domain-wide 301 to the primary apex	Ends cannibalisation, transfers authority, stops broadcasting bad data	DNS / LeadConnector
H3	Wrong zip 33596 across citations	Correct to 33594 on profile first, then every listing	NAP consistency is foundational to map-pack confidence	External platforms
H4	No meta description on the domain	Ship the recommended copy	Puts positioning and the guarantee in front of searchers at the decision moment	<code>index.html</code> — helmet block
H5	www and apex both serve 200, no canonical	301 www to apex, add self-referencing canonical	Two URLs for one page splits every signal	<code>vercel.json</code> , <code>index.html</code>
H6	5.4 MB page, one 2.4 MB image	Externalise and compress, starting with the largest	Mobile speed is both a ranking factor and the reason people leave before the booking widget loads	<code>index.html</code> manifest
H7	Body exists only as a JSON string	Pre-render to real HTML at build time	Removes render-queue dependency; makes the site visible to Bing and AI crawlers	Build process
H8	Profile website URL unverified	Point profile and appointment links at the correct domain	The profile is the single largest driver of local visibility	Google Business Profile

MEDIUM PRIORITY Important improvements

ID	Action	Why
M1	Build the first three service pages	A two-page site cannot rank for eight services. This is the main organic growth lever.
M2	Render FAQs as HTML and add <code>FAQPage</code> schema	Rich-result eligibility, and the content becomes crawlable at all
M3	Complete the <code>HairSalon</code> schema	Corroborates the profile; adds geo, service catalogue and credential entities
M4	Add Open Graph and Twitter Card data	Every share currently renders as a bare link. Compounding daily loss for a visual business.
M5	<code>noindex</code> the thank-you page	Keeps a dead-end page out of branded results
M6	Fix the four dead navigation links	Dead links damage trust and waste the recruiting opportunity for four empty chairs

ID	Action	Why
M7	Build the guarantee into a named, explained section	Strongest differentiator in the business, currently a headline with no substance. Highest-value conversion change on the site.
M8	Display real reviews with source attribution	Activates a verified trust asset that is currently unused
M9	Add H3 headings throughout	Cheapest meaningful on-page structural improvement
M10	Create <code>robots.txt</code> and <code>sitemap.xml</code>	Crawl control and faster discovery of new pages
M11	De-duplicate the tripled services markup	Removes near-duplicate on-page content
M12	Populate the profile Services section	Entity match between profile and site is a strong service-query signal
M13	Fix the Facebook phone number	Citation consistency, and directly recovers lost calls

LOW PRIORITY Nice to have

AI scalp analysis page once unblocked · haircuts page · `lang` and viewport in the static head · improved stylist alt text and an audit of the three empty alt attributes · swap the maps search link for a place link · embed a map in the contact section · breadcrumb and website schema · person schema for Dina Lara · weekly profile posts, monthly photographs and seeded Q&A · review-request habit at checkout · clean up the YellowPages and BBB name variants · `llms.txt` · analytics and Search Console on both domains · add “hair salon” naturally to the About paragraph · the nine supplementary FAQs · preload the hero image and display font.

Final metadata table

Ready to implement. Existing pages first, then the pages proposed in Step 5.

Existing pages

Page	Primary keyword	Local keyword	Recommended meta title	Recommended meta description	Priority
/	hair salon	hair salon Valrico FL	Hair Salon in Valrico, FL Color & Cuts Synergy Salon	Certified master colorists in Valrico, FL since 2004. Balayage, corrective color, keratin smoothing and precision cuts — every visit starts with a real consultation. Love it, or you don't pay. Book online or call 813.654.2055.	HIGH
/thank-you	—	—	Thank You Synergy Salon (<i>add noindex</i>)	None — exclude from index	MED

Pages to build

Page	Primary keyword	Local keyword	Recommended meta title	Recommended meta description	Priority
/hair-color-valrico	hair color correction	color correction Valrico FL	Hair Color & Color Correction in Valrico, FL Synergy Salon	Box dye gone wrong? Brassy, banded or damaged color? Our certified master colorists in Valrico fix it — trained at Redken 5th Ave and Keune Amsterdam. Free consultation, and you love it or you don't pay.	MED
/balayage-valrico	balayage	balayage Valrico FL	Balayage & Highlights in Valrico, FL Synergy Salon	Hand-painted balayage and precision foils by certified master colorists in Valrico. Soft, dimensional, low-maintenance color that grows out beautifully. See our work and book your consultation.	MED
/keratin-brazilian-blowout-valrico	keratin treatment	keratin treatment Valrico FL	Keratin & Brazilian Blowout in Valrico, FL Synergy Salon	Months of smooth, frizz-free hair through a Florida summer. Women, men, teens and kids in Valrico, always starting with a real consultation. Love it, or you don't pay — book online or call 813.654.2055.	LOW
/ai-scalp-analysis-valrico	scalp analysis	scalp analysis Valrico FL	AI Scalp Analysis in Valrico, FL Synergy Salon	A digital scan of your scalp shows what the mirror can't — the cause behind thinning, shedding or irritation. Available only at Synergy Salon in Valrico. Book a scalp analysis and start from facts.	BLOCKED

Week one — Monday 21 to Friday 25 September

The principle for week one is simple: stop the bleeding, then lay foundations that do not depend on client input — and unblock the things that do, on day one.

Day	Theme	Est. hours	Depends on
Mon 21 Sep	Access, baseline and decisions	6	Client availability for a 45-minute call
Tue 22 Sep	Kill the duplicate domain, fix the NAP	6	Registrar and profile access from Monday
Wed 23 Sep	Site metadata and head fixes	7	Repository and Vercel access
Thu 24 Sep	Testimonials, schema and dead links	7	Monday’s testimonial decision
Fri 25 Sep	Performance and handover	6	Wednesday’s deploy being live

Approximately 32 hours across the week. Estimates assume a single implementer with repository and profile access in hand by Monday afternoon.

Monday 21 September

Access, baseline and decisions · ~6h

Nothing can be proven later without a baseline captured before anything changes. This day exists to make the rest of the engagement measurable, and to unblock Thursday.

Task	Description	Owner	Est.
1.1	Collect access: Google Business Profile owner or manager, Vercel, GitHub, LeadConnector, the registrar for synergysalons.com, and Facebook page admin	Client	0.5h
1.2	Verify synergysalons.com and the www hostname in Google Search Console by DNS record; submit the homepage for indexing; confirm whether the new site is indexed at all	Us	1.0h
1.3	Capture the baseline. Rank positions for the twelve target keywords, profile insights export, PageSpeed Insights mobile and desktop scores, booking-widget completion rate if available, and screenshots of the results page for brand terms	Us	2.0h
1.4	Confirm where the profile website field and appointment link currently point, and whether either still targets the old domain	Us	0.5h
1.5	Decision call with Dina. Three questions: testimonials, real or removed; the AI scalp device brand name and whether the scan is free or paid; and a date for the current price menu	Both	0.75h
1.6	Set up the shared task board and agree the reporting cadence	Us	0.5h

DELIVERABLE Access log, baseline report, and a written record of the three decisions.

Tuesday 22 September

Duplicate domain and NAP · ~6h

The highest-severity items that require no code. By the end of today the business should have exactly one website and one consistent address everywhere it is published.

Task	Description	Owner	Est.
2.1	Implement a domain-wide 301 from synergyhairsalon.com to https://synergysalon.com/, covering both apex and www	Us	1.0h
2.2	Verify the redirect with live requests; confirm a single hop with no chain and no loop	Us	0.5h
2.3	Profile corrections: zip to 33594, hours verified, name standardised to "Synergy Salon", website field and appointment link pointed correctly, categories and attributes set, holiday hours added	Us	1.5h
2.4	Citation cleanup, first pass: Fresha, Yelp, YellowPages, BBB, Birdeye and N49 — zip, hours and business name on each	Us	2.0h
2.5	Correct the Facebook phone number to 813.654.2055 and check the page for the stale Summit Salon claim	Us	0.5h
2.6	Build the NAP consistency tracking sheet so round two in phase four has a starting point	Us	0.5h

DELIVERABLE One live domain. NAP consistency sheet with every checked source marked green or flagged for follow-up.

Wednesday 23 September

Metadata and head fixes · ~7h

The first code deploy. Everything here is low-risk, high-certainty, and independent of any content decision.

Task	Description	Owner	Est.
3.1	Branch <code>seo/phase-1-meta</code> off main	Us	0.25h
3.2	Add the meta description, self-referencing canonical, <code>lang="en"</code> and a viewport tag in the static head	Us	1.0h
3.3	Update the title tag to the recommended version	Us	0.25h
3.4	Add Open Graph and Twitter Card tags, and produce a 1200×630 share image from existing salon photography	Us	1.5h
3.5	Add <code>noindex</code> , <code>follow</code> to the thank-you page	Us	0.25h
3.6	Add the www-to-apex 301 in <code>vercel.json</code>	Us	0.5h
3.7	Create <code>robots.txt</code> and <code>sitemap.xml</code> ; submit the sitemap in Search Console	Us	1.0h
3.8	Deploy to a Vercel preview, QA on mobile and desktop, validate the share preview, then merge and deploy to production	Us	2.0h

DELIVERABLE Merged pull request and a live production deploy. Share previews rendering correctly. Sitemap submitted.

Close the legal exposure and make the existing good content visible to search. This is the day that depends on Monday's decision.

Task	Description	Owner	Est.
4.1	Replace the fabricated testimonials with real attributed reviews carrying name and source. <i>Fallback if the decision has not landed: remove the section entirely and ship without it.</i>	Us	2.0h
4.2	Add visible rating and review-count text near the booking call to action	Us	0.5h
4.3	Expand the <code>HairSalon</code> schema: <code>@id</code> , <code>image</code> , <code>logo</code> , <code>priceRange</code> , <code>geo</code> , <code>hasMap</code> , <code>areaServed</code> , <code>founder</code> , <code>foundingDate</code> , <code>knowsLanguage</code> , <code>hasOfferCatalog</code> , <code>legalName</code> , and an expanded <code>sameAs</code>	Us	1.5h
4.4	Render the six FAQs as real HTML with H3 questions, and add <code>FAQPage</code> structured data	Us	1.5h
4.5	Fix the four dead navigation links — ship Terms and Privacy pages, and either remove Gallery and Rent a Chair from the navigation until those pages exist or point them at an interim section	Us	1.0h
4.6	Validate everything with the Rich Results Test and the schema validator; deploy	Us	0.5h

DELIVERABLE Legal exposure closed. Schema validating clean. No dead links in the navigation.

Make the site fast enough that the booking widget loads before the visitor gives up, then report against Monday's baseline.

Task	Description	Owner	Est.
5.1	Extract and compress the 2.4 MB JPEG to WebP or AVIF and serve it as a file. This alone cuts the page by roughly 45 percent.	Us	1.0h
5.2	Externalise the remaining 38 inlined assets and add cache-control headers in <code>vercel.json</code>	Us	2.0h
5.3	Add responsive <code>srcset</code> and <code>sizes</code> , and <code>fetchpriority</code> on the largest contentful image	Us	1.0h
5.4	De-duplicate the tripled services markup; hide animation clones from assistive technology	Us	0.75h
5.5	Re-run PageSpeed Insights and compare against Monday's baseline	Us	0.5h
5.6	Write the week-one report and the week-two kickoff brief	Us	0.75h

DELIVERABLE Before-and-after performance comparison, week-one report, and the week-two brief.

DELIBERATELY NOT IN WEEK ONE

Server-rendering the page content is a high-priority defect, but it is an architectural decision rather than a quick fix — it depends on whether the site stays as a hand-edited bundle or moves to a static site generator. That decision belongs in week two, alongside the platform choice, because making it hastily would mean doing the work twice.

Twelve-week roadmap

Monday 21 September to Friday 11 December 2026. Five phases, sequenced so that nothing is built before the foundation it sits on.

- Phase 0 — Triage
- Phase 1 — Architecture
- Phase 2 — Money pages
- Phase 3 — Secondary pages
- Phase 4 — Local authority
- Phase 5 — Measure

Week 10 contains Thanksgiving on Thursday 26 November and is planned as a light week. It is also when salon demand peaks, so holiday hours and profile posting matter more than build work.

Phase detail

Phase 0 — Triage & foundations

WEEK 1 · 21-25 SEP

Detailed day by day in Part 3. Ends the duplicate-domain conflict, corrects address data across every listing, ships the missing metadata, resolves the testimonial exposure, and cuts page weight by roughly half.

Exit criteria: one live domain · NAP consistent across all checked sources · meta description, canonical, Open Graph and sitemap live · schema validating · no fabricated reviews published · measurable PageSpeed improvement against the day-one baseline.

Phase 1 — Architecture & conversion

WEEKS 2–3 · 28 SEP – 9 OCT

Week 2. The platform decision: keep hand-editing the 5.4 MB bundle, or move to a small static site generator. The recommendation is to move, because six service pages inside the current format will be painful and the move solves server-rendering for free. Then implement pre-rendering so the page body is real HTML.

Week 3. Conversion work: build the guarantee into a named, explained section repeated near every call to action; ship the real-review module; add H3 hierarchy throughout; fix alt text; scaffold the internal linking structure ready for phase two. Stand up analytics — GA4, Search Console, and conversion tracking on the booking widget, which currently cannot be measured.

Exit criteria: content server-rendered and visible without JavaScript · guarantee explained on-page · booking conversions tracked · heading hierarchy complete.

Phase 2 — Money pages

WEEKS 4–6 · 12–30 OCT

One page per week, in margin and urgency order: colour and colour correction, then balayage and highlights, then keratin and Brazilian Blowout. Each ships complete — copy, selected photography, FAQs with schema, internal links, sitemap update and an indexing request — rather than three half-finished pages.

CLIENT DEPENDENCY

These pages live or die on photography. Before-and-after colour work, balayage results and smoothing results are needed, ideally shot in week 3. Stock imagery will not carry a page whose entire job is proving skill.

Exit criteria: three service pages live, indexed, internally linked, and appearing in Search Console impressions for their target terms.

Phase 3 — Secondary pages & recruiting

WEEKS 7–8 · 2–13 NOV

Haircuts page, the rent-a-chair recruiting page, the AI scalp analysis page if the device details have arrived, a proper gallery, and real Terms and Privacy pages. The recruiting page carries disproportionate business value here: four empty chairs against near-zero keyword competition.

Exit criteria: every navigation link resolves to a real page · recruiting enquiry path live · scalp analysis page shipped or formally deferred with a reason.

Phase 4 — Local authority

WEEKS 9–10 · 16–27 NOV

The compounding work. Operational review-request habit at checkout, with the short link and the script. Profile posting cadence running weekly. Citation audit round two, plus submissions to the aggregators that feed everything else — Data Axle, Foursquare, Apple Business Connect and Bing Places. Local links from the Valrico and Brandon chambers, FishHawk community channels and neighbouring businesses. Profile Q&A seeded.

Exit criteria: review velocity measurably increased over the baseline · aggregator listings correct · posting cadence running without prompting.

Phase 5 — Measure & iterate

WEEKS 11–12 · 30 NOV – 11 DEC

The twelve-week report against the day-one baseline. Click-through analysis in Search Console, then a second pass on titles and descriptions based on what actually earned clicks rather than on what was predicted to. Content refresh on any page underperforming its impressions. Roadmap for the next quarter.

Exit criteria: a written report comparing every baseline metric · metadata iterated on real click-through data · next-quarter roadmap agreed.

What to expect, and when

Period	Realistic expectation
Weeks 1–2	No ranking movement. These are corrections and foundations. The measurable win is page speed and the end of the duplicate-domain conflict.
Weeks 3–6	Re-indexing completes. Profile consistency begins to register. Map-pack movement is possible from roughly week four onward, but is not guaranteed and depends heavily on review velocity.
Weeks 6–10	Service pages begin picking up long-tail impressions — the specific, lower-volume variants first. Clicks lag impressions by several weeks.
Weeks 10–16	Movement on primary terms becomes plausible. This extends past the engagement window, which is normal.

AN HONEST CAVEAT

Local SEO in a market with roughly 33 competing salons takes three to six months to produce meaningful, durable movement, and no agency can guarantee positions. What can be guaranteed is that every defect in this document gets fixed, that the work is measured against a baseline captured before it started, and that results are reported honestly — including when something did not work.

Measurement and approvals

What gets measured

Metric	Source	Why this one
Profile calls, direction requests and website clicks	Business Profile insights	The closest available proxy to actual walk-in and phone demand
Booking widget completions	GA4 event, to be built in phase 1	The only true conversion. Currently not tracked at all.
Organic sessions and landing pages	GA4	Shows whether the service pages earn their existence
Impressions, clicks and average position for the 12 target terms	Search Console	Impressions move first and are the earliest reliable signal
Review count and velocity	Profile, Facebook, Yelp	Velocity drives map-pack position more than total count
Mobile PageSpeed score and largest contentful paint	PageSpeed Insights	Directly tied to whether visitors reach the booking widget
NAP consistency across tracked sources	Manual tracking sheet	Foundational, and currently failing on several sources

Reporting: a short written update every Friday, and a full comparison against baseline at the end of week 12.

Decisions needed from you

#	Decision	What it blocks	Needed by
1	Testimonials — replace with real attributed reviews, or remove the section pending curation	Thursday of week one. Also the standing FTC exposure, which persists every day the section stays up.	Mon 21 Sep
2	AI scalp analysis — the device brand name, and whether the scan is free or paid	The scalp analysis page, which targets the least contested keyword available to this business	Mon 21 Sep
3	Access — profile ownership, the registrar for the second domain, and Search Console verification	Most of week one. Several high-priority items are platform-side rather than code-side.	Mon 21 Sep
4	Platform — keep the hand-edited bundle or move to a static site generator	Phase 1, and the shape of every service page after it	Mon 28 Sep

#	Decision	What it blocks	Needed by
5	Photography — scheduling a before-and-after shoot for colour, balayage and smoothing work	Phase 2. These pages cannot prove skill with stock imagery.	Fri 9 Oct
6	Price menu — the current, accurate figures	Any pricing content anywhere. Until it arrives, no dollar figures are published, which is the correct default.	Before phase 2 ends

Standing assumptions

Approval of this audit is assumed to land on or before Monday 21 September, or the whole timeline shifts by the delay. Access is assumed to be granted on day one. A single implementer is assumed at roughly 30 hours per week for phases 0 to 3, reducing in phases 4 and 5. No website code has been changed to date; the repository was read only.

IF ONLY THREE THINGS GET DONE

Redirect the second domain. Remove or replace the fabricated testimonials. Explain the guarantee on the page. The first two stop active damage, and the third is likely to move bookings faster than any ranking gained in the same period.

Synergy Salon — Local SEO Audit & 12-Week Roadmap · Prepared 18 September 2026 · Findings verified against the live site, the source repository and public listings
